Data Entry

Sycal Ventures Berhad

Klang Lama, KL

May 2019 – July 2019

- Accurately inputted and managed purchasing orders and delivery orders into the company's database, ensuring precise documentation of transactions.
- Efficiently organized and categorized purchasing orders and delivery orders based on months from May to July, optimizing accessibility and retrieval of records.
- Developed effective communication skills by collaborating with colleagues to clarify information and resolve discrepancies, promoting seamless data management.
- Cultivated strong attention to detail through consistent verification and validation of data, minimizing errors and contributing to data accuracy.

SKILLS

Programming Languages: Proficient in Java, HTML, CSS, JavaScript(ES6), Python(scikit-learn, numpy, pandas, matplotlib), Bash, SQL(MySQL), NoSQL(MongoDB), familiar with C++

Frameworks: Proficient with Figma, Bootstrap, Tailwind CSS, React.js, Node.js, Express.js, RESTFUL APIs, familiar with TypeScript(Angular), Vue.js, Canva

Developer Tools: Proficient with Git, GitHub, Docker, Postman, ESLint

Cloud services: Proficient with AWS (e.g. S3 Bucket), familiar with Azure

Soft Skills: Leadership Skills, Creative Thinking, Good Communication, Problem Solving, Time-Management, Research, Team Player

PROJECTS AND LEADERSHIP

Personal Portfolio (Own Project)

- Used HTML, CSS, JavaScript to build a personal portfolio.

MERN Bookstore Project (Own Project)

- Developed an user friendly bookstore that allow users to create, read, update, delete with using HTML, Tailwind CSS, JavaScript, React, Nodejs, MongoDB, Express.js

Covid Web Application (Uni Project)

- Developed a covid-19 contract tracing web application with 3 other students, using REST architecture, HTML, CSS, Bootstrap, Vue.Js, JavaScript, Express.js and MYSQL
- Users log in to track their previous check-in location, view hotspots. It also allowed venue managers to monitor venue check-ins and health officers to update hotspots and local cases.

Team Pursuit Optimization Tool (Uni Year End Private Project)

- Actively contributed in team projects and lead a group of 9 people with Agile methodologies. In the end, developed a website to manage team pursuit using REST architecture, Excel, JavaScript, Node.js, Vue.js, HTML, CSS and MYSQL.
- Users (coaches) can give information of race and system will generate illustration graphs to demonstrate the team performance.

ATOM XML Server (Uni Project)

- Developed an aggregation server using Java Socket that responds to requests for feeds and accepts feed updates from clients.
- The system is fault tolerance, it allowed the system to shut down suddenly and the information is still there when the server is online back again.

ACHIEVEMENTS & CERTIFICATIONS

GovHack hackathon (2023): Collaborated with a team of 7 strangers while independently using Figma to create the prototype for addressing the challenge of "Charging Electric Vehicles in the ACT."

Pearson English Test (PTE) (2023): Overall Score: 71/90

Computer Vision Competition (2022): Participated in a Game Dataset competition in my course (Computer Vision 3315) and compete against 52 students. In the end, rank 12/52 for efficiency and 5/52 in class for accuracy.
